[04713473] ALL: Insight into Person/Address assignment details

A new object, *Person/Address Assignment* has been added to the Angles for SAP model with a reference to the already existing object *Address*. This will provide a better insight into Person and Address assignment details. Moreover, it will solve the issue of missing data, when multiple persons or addresses are recorded in a single address.

ID	Address	Person	First name	LAST name	Comm. Method	Valid From Date	Valid To Date	Active	Validity Status	Address Version	Telephone	FAX
1	145/2076 0001-01...	Person Address Assignment	145	2076	Daniela Weckesser	RML (Remote Mail)	Dec/31/9999		Valid (Valid)	415 287 3318	415 372 8322

[04550827] S2D: Projected/Claimed Stock calculation improvements

Angles for SAP Projected / Claimed stock calculations will now support all purchase order schedule lines and purchase requisitions with logistic behavior equal to "Stock transfer within the plant", "Stock transfer between plants" or "Stock transfer within subsegment" where the material on supplying plant level does not have the MRP relevancy of requirements order property value equal to: '1 (Materials for dependent requirements are not planned)'.

[04570373] S2D: Improved Supply/Demand matching for contract quantities without call off

Purchase orders of type Contact (K) with no call off, were incorrectly considered MRP relevant. Therefore, quantities with no call off were considered to be received on the due date of the order. As a result, for these types of orders, the supply/demand matching in the order network calculation was incorrect, showing differences with the SAP stock requirements list (MD04).

This has now been resolved. Quantities for purchase orders of type Contact (K) will now only become MRP relevant after the call off.

### [04708649] Reference from EWM stock quant to storage bin is empty

We have updated the logic for reference from *EWM Stock* to *EWM Storage Bin*. This will provide *EWM Storage Bin* information which is linked to EWM Stock via EWM Handling Unit and updated logic for Material and EWM Product reference logic from EWM Stock. Also reference to Material and EWM Product is now available from *EWM Handling Unit*.

### [04708617] P2P: Material Short Text field available on Material Document Item

On the Material Document Item level, the Material is blank in case of service purchase orders. This has been resolved by adding a new property *Material Short Text*.

### EA4IT: Automation Task Action History showing duplicate records and empty columns

When automation task actions were executed, two identical records were created in the object *Automation Task Action History*, one being a duplicate. Also, some automation task action column fields like Created by, Angle, Display would incorrectly show up as empty. Both issues have been resolved.

## IT user - Fixes and improvements

### P2P/GRC: VendorInvoiceClassification shows an error

When GRC PTP-LOG is deactivated, it results in the following error for the property *VendorInvoiceClassification*: 'Cannot resolve InvoiceReceiptHeader.MMinvoiceClassification'. This property was declared in one file and used as an argument in another file. When the file with Argument declaration is not active, the refresh fails because of missing dependency. This has now been resolved.

### Commit fails when controlling hierarchy amendment is selected

When a controlling hierarchy amendment was selected, the commit in the Modelling Workbench would fail on a malformed folder name. This has been resolved.

### S4Hana: DownloadDeterminator

To identify the correct SAP DB to be downloaded, the DownloadDeterminator code has been changed to use three digits of the version number, instead of two.
